

CLAIMS

1. A transport car with rollers, all of which can be steered, comprising an anti-theft protection that can be activated, characterized in that the anti-theft protection includes two or more of the rollers (4, 7) are fixable in a predetermined steering position.
2. A transport car according to claim 1, characterized in that an angle, at which the steering position of the rollers (4, 7) can be fixed, is different in reference to a longitudinal axis of the transport car (1).
3. A transportation device according to one of the previous claims, characterized in that the transport car is provided with several axles (3, 6) and the two or more rollers (4, 7) that can be fixed in the predetermined steering position are mounted at a front axle (3) as well as a rear axle (6).
4. A transport car according to one of the previous claims, characterized in that the roller (4) mounted at the front axle (3) is fixable in position at a diagonal angle in reference to the longitudinal axis of the transport car (1) and the roller (7) mounted at the rear axle (6) is fixable in position at a straight steering angle in reference to the longitudinal axis of the transport car (1).
